

Product datasheet

Buffer

Buffers for dock levellers are designed to absorb the impact force during the docking process protecting both the vehicle and the docking system.

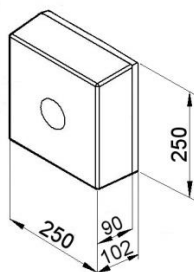

The PGF products are standard low-cost high-quality rubber buffers with a high resistance to wear and tear. All rubber elements are made of high-quality new rubber material ensuring a long service life.

The rubber elements are delivered on a hot-dip galvanized steel plate and then welded to the leveller frame or mounted to the loading ramp.

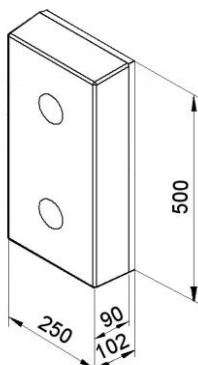

PGF 70

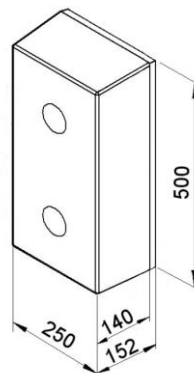

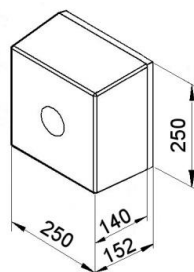

Standard high-quality rubber buffer PGF with a high resistance to wear and tear for lower loading frequencies.

PGF 90

PGF 140

These long service life buffers are designed for extremely high impact forces.
